

## ENVIRONMENTAL AND SUSTAINABILITY POLICY

V.Besana S.p.A bases its strategy on three pillars of Sustainability:

- ❖ **respect for the environment,**
- ❖ provide all customers with **safe, high quality and sustainable products**, applying all the regulations relating to product healthiness and food safety
- ❖ attention to **social aspects.**

V.Besana S.p.A constantly optimizes the production processes considering the environment and the protection of natural and energy resources.

Approaching the Environmental Management System, V.Besana wants to improve environmental performance by respecting the fundamental management principles: commitment and policy for the environment, planning and evaluation of **environmental aspects, system measurement and control.**

To achieve the goal, the Company undertakes to invest resources to ensure a process of continuous improvement of its **environmental performance**, an indispensable condition to speak of "sustainable development".

Environmental programs provide for the **reduction of environmental impacts** and optimal use of resources:

- Reduction of emissions;
- Energy saving strategies, including the use of renewable sources (Solar Photovoltaic) and technologies such as Tri-generation;
- Product life cycle analysis, including packaging;
- Optimal management of the waste produced, favoring recycling and recovery where possible;
- Water saving programs and safeguarding of surface and underground water resources
- Efficient logistics chain from an environmental and ethical point of view;
- Carbon and water footprint evaluation (**GHG** protocol)

V.Besana S.p.A undertakes to ensure **compliance with the laws** and all applicable provisions, and guarantees availability for collaboration and participation by local institutions, internal and external human resources and all Parties concerned, in order to prepare the most suitable measures for the **prevention and protection of the environment.**

V.Besana S.p.A also undertakes to affect the indirect aspects relating to goods and services' suppliers, choosing if necessary, on sustainability criteria and promoting the **culture of respect for the environment** among suppliers and customers.
